MEDIA RELEASE

TELSTRA DEPLOYS CALYPTECH'S WIRELESS LOCAL LOOP INTERFACE UNIT

MELBOURNE, Victoria – CalypTech today announced the delivery of their Wireless Local Loop Interface Unit (WLL-IU) solution to Telstra for deployment to their customers in remote rural Australia. The units have been custom designed and ruggedised to meet the technical challenges associated with delivering the full suite of Telstra's services as well as the challenges associated with the extreme environments encountered in Rural Australia.

The WLL-IU is designed to interface to a Fixed Wireless Terminal, and drive long lines to customer premises. Advanced Digital Signal Processing technology is employed on the Interface Unit, to enhance the voice quality, and to ensure that the quality of service delivered to the customer is optimised.

CalypTech CEO John Maher was quoted as saying "Rural Australia presents enormous technical and environmental challenges. Telstra were unable to find an off-the-shelf solution to provide sufficient level of service to their remotely located customer base. The CalypTech Interface Unit is cable of driving long stretches of copper, delivering voice, circuit switched data, TTY services and enhances the customer experience."

About CalypTech

CalypTech (www.calypTech.com) is a leading provider of innovative technological solutions. Offering both customised products and design services, CalypTech have a proven track record in addressing difficult technical challenges in a range of telecommunications industry segments globally, including semiconductor, networking and data security.

Focused on customer success, CalypTech work in close partnership with their diverse client base, applying world class expertise in Radio Frequency, Analog, Digital Signal Processing, and high speed digital systems design, in order to deliver optimal solutions, ensuring reduced risk and faster time-to-market for the client.
